Summary

Software Engineer with 4 years of experience building scalable and maintainable web applications, API services, and mobile applications. Proficient in JavaScript and JavaScript-based technologies. Knowledgeable about the best practices and enterprise-standards in architecture. Looking forward to work on projects that has good opportunities for learning.

Experience

Neudesic

Consultant II
Kochi, Kerala

June 2022 to Present

- Architected and developed a comprehensive API template which is being used as the base for all API services of a major airline in India.
- Built and deployed numerous API services for the airline's ticket booking platform, now being consumed by millions of users worldwide.
- Engineered a sophisticated cryptography service for an international fertilizer company which now sits on top of their database instances.
- Improved code quality of microservices by introducing best practices in unit and E2E testing and achieved 100% code coverage consistently.
- Contributed extensively to internal-use projects and template repositories by developing pixel-perfect user interfaces for them.

Bititude

Software Engineer
Calicut, Kerala

July 2020 to June 2022

- Implemented a fully-featured real-time video conferencing system with integrated chat functionality for conducting live classes in an LMS.
- Created reusable and extensible components from scratch for Calendar and Table, which are now being used on multiple projects.
- Led and mentored a small team of interns throughout the lifecycle of a project, training them and ensuring that milestones were met in time.
- Wrote detailed documentations for sophisticated components which motivated the creation of a component library used organization-wide.
- Conducted workshops on various topics related to technology and actively involved in creating modules and tutorials for training interns.
